PROFILE

Fullstack developer with backend focus working in real production environments – not just study projects. Currently building AI integrations and automation workflows at a Stockholm SaaS company, with client meetings, team syncs and deliveries to real users. In parallel, contributing to a production codebase where I own authentication and authorization. Comfortable across the full chain: API design, databases, testing, CI/CD and deployment.

EXPERIENCE

AI & Automation Developer (part-time consultant) — SoMe Software

Jul 2026 – present · Stockholm · social media SaaS platform

- Building AI integrations and automation workflows (n8n) in a commercial SaaS product with paying customers
- Working directly with the founder on product decisions; participating in team syncs and client-facing delivery
- Analyzing and extending an existing codebase – Node.js, TypeScript and external API integrations

Backend Developer (team codebase) — Hälsgruppen

2026 – present · Stockholm · internal order/CRM system in production

- Own the authentication and authorization layer: role-based authorize() preHandler for 5 roles, locked registration endpoint and JWT expiry handling
- Writing automated tests (Jest) for authorization logic in a live codebase with strict code conventions
- Working against real integration architecture with webhooks and domain-driven structure

Earlier career: Logistics & delivery

2018 – 2024 · Budbee, Pressens Morgontjänst and others

- 6 years of operational responsibility and delivery under time pressure – the foundation of my work ethic and understanding of real business workflows

PROJECTS

Fakturly — SaaS invoicing system (in development)

- Two portals (admin/client): automatic invoice generation, Stripe webhooks for payment detection, email reminders and PDF export

Next.js · TypeScript · Prisma · PostgreSQL (Supabase) · NextAuth · Stripe · Resend · Vercel

RAG Application — AI knowledge assistant (in development)

- Retrieval-Augmented Generation with the Anthropic API: document ingestion, embeddings, semantic search and real-time streamed responses; GraphQL data layer

TypeScript · Anthropic API · GraphQL · PostgreSQL · streaming

QuickBite — Distributed microservices system

- 5 independent services, one database each; event-driven communication via RabbitMQ; Docker Compose, Nginx, CI/CD, Testcontainers

Bun · Fastify · TypeScript · RabbitMQ · PostgreSQL · Docker · github.com/devinder-dev/quickbite

AI Prompt Manager — Fullstack AI app

- JWT authentication, repository pattern backend, React frontend

Bun · Fastify · MongoDB · React · TypeScript · github.com/devinder-dev/Backend-structure-prompt-manager

TECHNICAL SKILLS

AI & Automation: Anthropic API, RAG, n8n, MCP (Context7, Snyk), Claude Code, Cursor, OpenAI

Backend: Node.js, Bun, Fastify, Express, REST API, GraphQL, JWT, argon2id

Frontend: React, Next.js, TypeScript, Tailwind CSS, Vite

Databases: PostgreSQL, MongoDB, Redis, Prisma

DevOps & Testing: Docker, Nginx, GitHub Actions CI/CD, Jest, Cypress, Testcontainers, AWS S3, PM2

Security & Methods: GDPR, NIS2, input validation · Agile (Scrum/Kanban)

EDUCATION

Fullstack Developer Open Source (Higher Vocational, YH) — Chas Academy, Stockholm

Sep 2025 – Jun 2027 · React, TypeScript, Node.js, PostgreSQL, testing, CI/CD, agile methods

Cybersecurity for Professionals (25 YH credits) — Chas Academy

Oct 2025 – Jan 2026 · Risk analysis, GDPR, NIS2

Computer Systems and Information Technology — Riga Technical University

Sep 2017 – Nov 2018
